

African American Cardiovascular pharmacogenomics CONsorTium

ACCOuNT: discovery & translation

Minoli Perera PharmD, PhD

Minorities in Pharmacogenomics

- ❖ More studies in European descent populations
- ❖ Most of the clinical studies in AA involve SNPs found in other populations
- ❖ Correct for race
- ❖ What are we missing
 - ❖ Variation unique to AA
 - ❖ Effect of genetic architecture on association.

Bustamante C, Nature 2011

- ❖ African are the oldest population – more genetic variation
- ❖ African Americans are admixed (a mix between Europeans and Africans)
- ❖ Disparities in disease (breast cancer)
- ❖ Difference in drug metabolism (CYP3A5)

ACCOuNT: Goals

- ❖ U54 collaborative grant (NIMHD)
 - ❖ Collaborative center across two major US cities: DC and Chicago
- ❖ Accelerate discovery and translation in African Americans.
- ❖ Build infrastructure for continued work.
- ❖ Provide publicly available data for other investigators.
- ❖ Engage the African American community (Consortium Core)

PGx Signal	Drug	PGx Alternatives
	Aspirin	
	Montelukast	
	Hydralazine	/
	Metoprolol	/
	Rabeprazole	/
	Warfarin	None

Current medications with no PGx recommendation:

Grazoprevir Levocetirizine	Liraglutide Spironolactone	Valsartan
-------------------------------	-------------------------------	-----------

DISCLAIMER: This information displays medications according to their pharmacogenomic likelihood of various clinical outcomes for this specific patient. Other clinical factors, including but not limited to drug-drug interactions, organ dysfunctions, and comorbidities, should be considered when determining overall appropriateness of these medications for this patient.

Patient Engagement and advocacy

- ❖ Consortium Core: Lead - Doriane Miller (UChicago)
- ❖ Community-based research through Pilot Grant applications
- ❖ Interaction with the PCORI Patient and Clinician Advisory Committee.
- ❖ Community and Stakeholder Advisory Board (CSAB)
 - ❖ Representation from both cities: Chicago Public Health, Rodham Institute, Georgetown Howard Universities Center for Clinical and Translational Science.

PRECISION MEDICINE FOR ALL

African American Data Commons

- ❖ In collaboration with Bob Grossman (UChicago) and Li Gong (Stanford)
- ❖ Build relevant data models and elements.
- ❖ harmonizing the data collection across sites.

Data Matrices

Requires username and password.

- Data Submission Counts Matrix
- Experiment Summary Matrix
- Experiment Results Matrix

Data Model

To facilitate a common set of standards and the use of tools for analysis, a data model has been developed for this project. We will work to make the data model as close to the Genomic Data Commons (gdc.cancer.gov) data model and as compliant to the GA4GH standards as practical.

ACCOuNT: U54 funded project

- ❖ **ACCOuNT: African American Cardiovascular Pharmacogenomics CONsorTium**
- ❖ 2 major US Cities
 - ❖ DC and Chicago
- ❖ 7 institutions
 - ❖ Northwestern, Univ. of Chicago, UIC, George Washington Univ., Shenandoah Univ., VA DC Medical Center, Stanford
- ❖ Community involvement

Two additional effort with NU

- ❖ eMERGE PGx
 - ❖ Part of the larger eMERGE initiative.
 - ❖ CYP2C19 / Clopidogrel
 - ❖ SLCO1B1 / Simvastatin
 - ❖ VKORCI = CYP2C9 / Warfarin
 - ❖ Report supplied by Baylor – eMERGE-wide
- ❖ Clinical CYP2C19 testing directed at the Cath Lab.

To those that make it possible
